

LARUE D. CARTER MEMORIAL HOSPITAL
Facility Fact Sheet
SFY 2009

Larue D. Carter Memorial Hospital has served inpatients with chronic and severe mental illness from all across Indiana since 1948. In 1996, the hospital moved to its current location at 2601 Cold Spring Road, formerly a VA Medical Center facility. The hospital has a three-fold mission of providing specialized treatment, education and research. The hospital also serves as a training site for psychiatric residents and medical students, psychology post-docs and interns, nursing students, social work students and rehabilitation therapy students. In addition, the hospital serves as a site that conducts pharmacological research designed to combat severe and chronic mental illnesses.

The hospital is accredited by the Joint Commission and CMS (Center for Medicare and Medicaid Services). Maintaining these accreditations ensures quality of care and continued Medicaid/Medicare reimbursement status.

The hospital is composed of three divisions: Two that provide care to adults with mental illness, and one division for children who are seriously emotionally disturbed, for a total of 159 beds. These divisions are as follows:

- **Journey to Recovery Division:** In this 78 bed division, several specialty populations are served. One includes the Borderline patients Acquiring Skill for Empowerment (BASE) Program, with 12 beds devoted to the treatment of this personality disorder. Another unique unit is the Clinical Research Unit, with the capability of housing and treating up to 21 patients on research protocols. This research team conducts an average of 12 studies per year with an average of 90 patients per year participating as inpatients and 30 patients working closely with our research team while remaining in their home community. Two additional units care for general psychiatric patients with a wide variety of disorders.

- **Pathway to Healing Division:** In this 81 bed division, specialty populations include a unit that houses deaf patients from across the state who need inpatient services and a 12 bed Transition Unit. Treatment is individualized through interdisciplinary assessments and may include stabilization of symptoms through psychopharmacology, management of medical problems, individual and group therapy, patient and family education, rehabilitation and recreation therapy, academic and skills training, vocational training, and supported employment. Within this division are 42 beds devoted to serving patients ages 7 to 18, consisting of children with severe emotional disturbances. An interdisciplinary team of professionals provide assessments and individualized treatment planning in an environment that offers an intermediate length of stay. The program provides stabilization of symptoms through psychopharmacology, behavior management, individual and group therapy, recreation therapy, social skill training and academic services in collaboration with Indianapolis Public Schools.
