

They smile because they're happy . . .
You smile because they're healthy.

A happy, healthy environment is something every parent wants for their child, and something every child care provider should strive for. But hidden environmental hazards in your facility could harm children, leading to lifelong impacts. Protect the children in your care from unseen environmental hazards such as lead-based paint, radon or unsafe pesticides. Become a member of Indiana's Five Star Environmental Recognition Program.

It's a free voluntary program that helps you address these potential hazards cost effectively.

Now you can have peace of mind.
