**Manufacturers of Recycling Equipment
& Industrial Wastewater Treatment Systems**

The Washer Washer

... a simple and green approach to recycling water-based cleaning solutions! How to save money, improve parts' cleanliness, minimize rejects, increase salt spray, reduce waste hauling, cut utility bills & lower chemical usage – by extending the life of your aqueous cleaners.

But First:

**Let's start by defining your oils/ soils,
so we know how to attack those contaminants!**

Beginning with your oils, are they:

- All/Part free oil? **Skimmers / Shop Vac.**
- All/Part dispersed? **Coalescers / Other O/W Separators.**
- All/Most/Any emulsified? **Chemicals / Membranes.**

And how about your soils, are they:

- Large or small? **Conventional Filtration – Bags, Cartridges, etc.**
- Primarily/exclusively ferrous or magnetic? **Magnetic Filters.**
- Abundant or few? **Clarifier / Settling Tank / Side-Stream Filters.**
- Dissolved or particulate? **Chemicals / Membranes.**

Oil Skimmers

Floating Suctions
Ropes
Tubes
Mops
Belts
Etc.

Arbortech Confidential Proprietary

Coalescing Oil/Water Separators

Offered In A Variety Of:

- Tank Configurations
- Tank materials of construction
- Media spacing
- Media materials of construction

Arbortech Confidential Proprietary

Liquid/Solids Filters

Indexing Roll Media
Magnetic
Cartridge
Screen
Basket
Bag

- Key facts
- Questions / Answers

What Does Arbortech Do?

We design, manufacture and service equipment & systems to recycle aqueous cleaning solutions, with benefits like:

- Helping you meet local regulatory and federal EPA compliance standards
- Concentrating your waste for easier, more efficient, less expensive and maybe less frequent haul away
- Improving process control by washing your parts in consistently high quality, continuously “treated” cleaning solution
- Saving you money; payback ~1 year
 - less labor, water, energy needed
 - cleaning chemistry usage slashed

How Does It Work? **MAGIC!**

The Washer Washer Membrane - How it really works.

*Small cleaning solution molecules pass through membrane.
This recycled solution is called permeate and it
is returned to your wash tank.*

Membrane Construction

**316L SS Substrate
(500X)**

**TiO₂ Membrane
(20,000X)**

- Rugged** – for tough industrial applications – no harm if dropped, kicked around or over-tightened
- Temperature range compatibility** – up to 200+ degrees Fahrenheit – without thermal cracking
- Thrives** under both highly acidic and extremely caustic conditions, pH range = 0-14
- Easily serviced**, fast membrane exchanges / CIP... with almost anything
- Long-lived** – a decade so far without a single field failure
- Capable** of being back-pulsed or deadheaded

Multi-Stage Cleaning Process

**Arbortech's Washer
Washer Recycling
Systems**

**Results/Savings:
Payback ~ 1 year**

***The difference:
it's as clear as... night from day!***

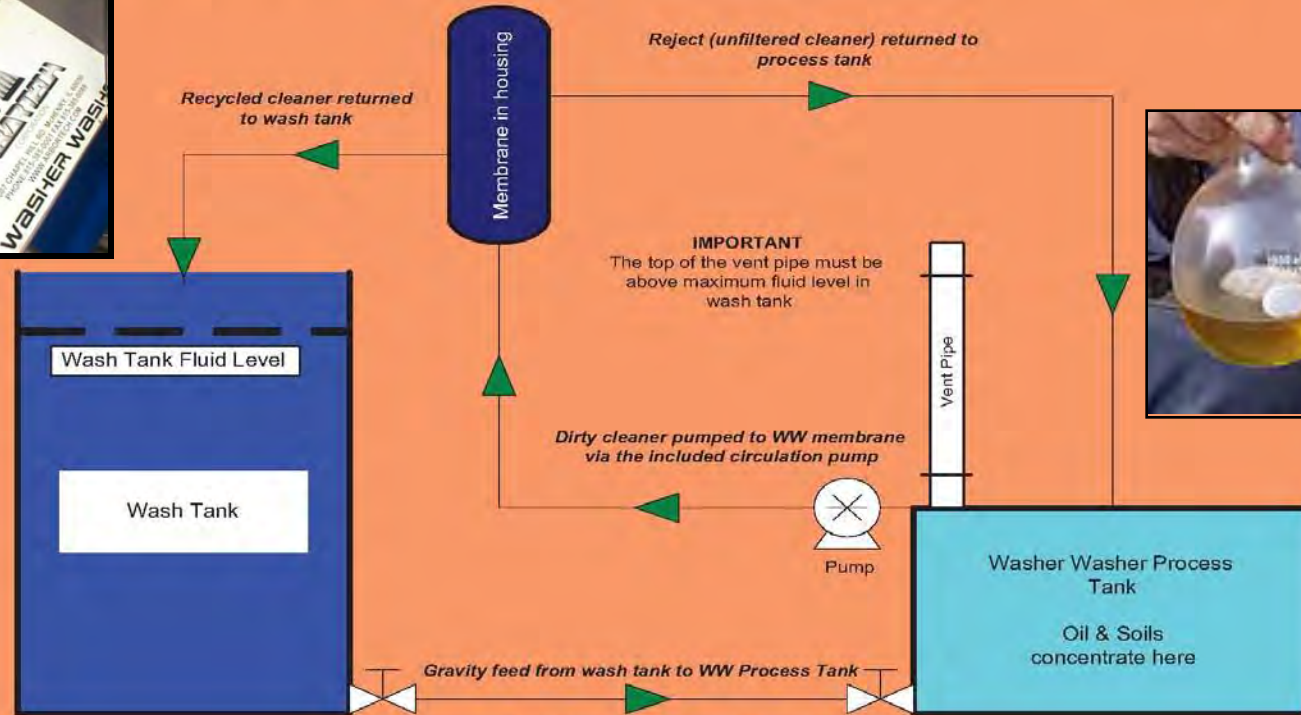

Cleaning Process Issues:

1. Cleaning solution dump / recharge frequency?
2. Line down?
3. Costs associated with change-out?
4. Quality issues related to cleaning process?

Solving Your Cleaning Issues

Washer Washer Schematic

Washer Washer Flow Diagram

Dirty cleaning solution is continuously gravity fed to the WW process tank where it is pumped through a membrane. There, portions of the dirty cleaner are purified (recycled) by passing through the S.S./TiO₂ membrane and sent back to the wash tank. This recycled cleaner is called permeate. The remaining, uncleaned or reject solution is returned to the WW process tank. This is a perpetual process - continuous removal of oily waste from the cleaner tank, 24/7, and greatly extends the useful life of the cleaning solution. The process tank is periodically emptied of concentrated oily waste.

Problem? No Problem...

A Midwest engine manufacturer suffered paint defects in its chromate / e-coat paint line in 2005. The symptom was a series of pin-hole dots, all the way down to the surface of the substrate, raising concerns over corrosion protection. Daily testing eventually led to the discovery that cleaning chemistry additions necessary to maintain sufficient free alkalinity to clean the parts raised total alkalinity so high that a white residue was deposited on the parts from the increasing level of spent chemistry. As a result, these cleaning tanks had to be dumped and recharged bi-weekly.

Arbortech technology removed the spent fractions, oils and soils, without disturbing the solution's cleaning effectiveness; in fact, it improved! With recycling equipment in place, first year benefits included:

- Wash tank life nearly tripled
- Cleaning chemistry purchases dropped significantly
- Waste treatment costs fell from less frequent tank dumps
- Savings experienced in water usage, energy and labor
- Payback was essentially 12 months – specifically...

Nu-Way Industries, Inc. Des Plaines, IL

With high levels of zinc, fats, oil and grease in the cleaner and other process tanks in its 2 powder lines, this coater was forced to consider options for wastewater treatment. Membrane filtration was the solution for their solutions.

Joe Bappert, facilities manager at Nu-Way, says that they chose membrane filtration as an alternative to a waste treatment system that would have cost more than \$150,000 and taken up considerable floor space with no return on investment. Among the benefits of operating a recycler, he says, “We not only trapped the oils in our solution, but we also significantly reduced the zinc count in our alkaline cleaning tank solution!”

“Turbidity in the tank is lower; our process operators find it much easier to clean the tank; we have better bath quality and have improved the bottom line,” says Bappert. Levels of zinc had stopped Nu-Way from discharging their overflow, but with the recycler, they no longer have a problem.

Although zinc was not a primary target for the recycler, it turned out that enough zinc got tied up with oil removed from the washer solution to keep the cleaner and the rest of the stages in the line much lower in zinc levels.

Results & Benefits

- Extended cleaning solution life, often 4-6X or more
- Fewer washer-related rejects – 50%+ reduction in reworked parts = higher yields
- Substantial savings in cleaning chemistry purchases – as much as >80% reported
- Concentrated waste, therefore disposal fees drop
- Lower dump/recharge labor costs – threefold+ reduction in hours
- Cut manufacturing line down situations
- **Short payback time – usually ~1 year**

Pilot Project Results

Technology Evaluation Highlights

**January 2003
to June 2003**

Oil & Grease

= 88% Removal Rate

Suspended Solids

= 93% Removal Rate

Cleaner Chemical Usage

= 64% Reduction

Wastewater Generation

= 94.5% Reduction

W.W. & Cleaner Costs

= 78% Reduction

Washer-Related Rejects

= 51% Reduction

NEW COLONY SIX
VOTED
BY THE LISTENERS
OF WLS CHICAGO

The sensational sound of
"I Confess" brought the beginnings
of fantastic success to Chicago's
New Colony Six.

Combining basic, raw garage rock with six parts of
incredibly diverse musical talent, the New Colony Six
broke through the barricades of convention and
dared to venture into new realms of creativity and
self-expression.

Fall 1965 sessions at Sound Studios, 230 N.
Michigan Avenue, produced the Colony's first 45, "I
Confess" b/w "Dawn Is Breaking." Released as
Centaur 1201, "I Confess" hit the airwaves in
November 1965. On February 4, 1966, the record

10:00 P.M. *Denotes record first heard in Chicago on WLS.

On August 5, 1966, *Breakthrough* debuted as the
featured album on WLS Silver Dollar Survey.
Boasting nearly all original compositions, the New
Colony displayed some of the most unique and inno-
vative sounds ever laid to wax.

More than 35 years later, *Breakthrough* still retains
a life all of its own. Original copies fetch hundreds of
dollars, but most importantly, the music continues to
amaze, entertain and inspire. Simply stated, The New
Colony Six created music for yesterday, today, and cer-
tainly tomorrow. Now that's a "Breakthrough!"
