HUMAN SERVICES, INC.

4355 E. 600 North / P.O. Box 119
Clifford, IN 47226
P (812) 372-8407 | F (812) 378-7490
Serves: Shelby, Johnson, Decatur, Bartholomew and Jackson Counties

PROGRAM INFORMATION

ENERGY ASSISTANCE PROGRAM

The Energy Assistance Program provides financial assistance to low-income households to maintain utility services during the winter heating and summer cooling seasons. The program is implemented through the Community Action Agencies with outreach offices in every county. Heating assistance runs from November 1 to March 15 and cooling assistance runs from June 1 to September 30.

WEATHERIZATION ASSISTANCE PROGRAM

The Weatherization Assistance Program provides comprehensive weatherization services to low-income households. Activities may include, but are not limited to, furnace and water heater health and safety evaluation, repair and replacement; insulation of the attic, sidewalls or other uninsulated areas; and air sealing of the structure. Services are designed to reduce energy consumption and utility costs for heating low-income homes. Anticipated savings for weatherization are 15-25%.

ENERGY ASSISTANCE INCOME GUIDELINES

To qualify for energy assistance, a household's annual income cannot exceed 150% of the poverty guidelines. A chart describing the current income maximum allowable per household is available on IHCDA's website, at www.ihcda.in.gov.

The State of Indiana offers multiple resources and educational programs to encourage Hoosiers to become more energy efficient. The Pence-Ellspermann Administration is committed to educating the public about responsible energy decisions.

Lt. Governor Eric Holcomb

WEATHERIZATION AND ENERGY ASSISTANCE PROGRAMS

ENERGY SAVING TIPS

SIMPLE THINGS TO CHECK AT THE BEGINNING OF EACH HEATING SEASON:

- Make sure attic hatches are closed as well as crawl and basement access doors.
- Be sure that all windows are in the fully closed position and that any locks are engaged.
- Make sure that fireplace dampers are closed when not in use.
- Follow up after a visit from an electrician or plumber to make sure insulation was returned to its place and no ducts were disconnected.
- Open heating system registers and move anything covering them, such as carpets or furniture.

SIMPLE STEPS THAT CAN SAVE YOU UP TO \$500 ANNUALLY:

- Replace two incandescent light bulbs with ENERGY STAR CFLs.
- Lower your hot water heater's temperature to 120°.
- Use the right size pot on the stove burner.
- Turn off lights, TVs and computers when you're not in the room.
- Replace your old refrigerator with an ENERGY STAR model.
- Install a programmable thermostat, and use it properly.
- Get rid of (or unplug) that old fridge in the garage.
- Wash clothes in cold water.
- Towel-dry your hair instead of using a blow dryer.
- Use the air-dry feature on your dishwasher.
- Use power strips, and turn them off when not in use to reduce "phantom energy usage."

EASY, NO-COST THINGS TO DO:

- Turn your thermostat down when you are away or sleeping.
- Turn water heater temperature down to 120° F.
- Utilize drapes or heavy curtains to your advantage; open them when the sun shines, close them when it doesn't.
- Clean clothes dryer lint traps and dryer outlet pipes; they must exhaust outdoors.
- Air dry dishes instead of using your dishwasher's drying cycle.
- Wash only full loads of dishes and clothes.
- Turn off your computer and monitor when not in use.
- Plug home electronics, such as TVs and DVD players, into power strips; turn the power strips off when the equipment is not in use (TVs and DVDs in standby mode still use several watts of power).
- Look for the ENERGY STAR label on home appliances and products. ENERGY STAR products meet strict efficiency guidelines set by the U.S. Environmental Protection Agency and the U.S. Department of Energy.

EASY, LOW-COST THINGS TO DO:

- Clean or replace your furnace filter.
- Convert light bulbs to compact fluorescent; replace bulbs in highest use locations first.
- Seal around penetrations in exterior walls, ceilings, and floor.
- Replace broken or missing outlet covers and switch covers and install child-proof plugs.

MODERATE COST ITEMS FOR DO-IT-YOURSELFERS:

- Install a programmable thermostat.
- Install low-flow showerheads and faucet aerators.
- Install a water tank wrap IF you have an older, fiberglass insulated unit.
- Insulate hot water pipes and ducts in unconditioned areas.
- Perform attic air sealing and then add insulation up to R-38.

MODERATE COST ITEMS THAT MAY REQUIRE A CONTRACTOR:

- Attic air sealing.
- Duct sealing.
- Furnace cleaning and tune-up.
- Attic insulation.
- Exterior wall insulation.

CONTACT INFORMATION

If you need weatherization assistance or energy assistance please contact the organization that serves your county. If you have additional questions please call the Indiana Housing and Community Development Authority at 800-872-0371.

Serves: Clay, Putnam and Vigo Counties

A **BLOWER DOOR** is a machine used to measure the airtightness of buildings. It can also be used to measure airflow between building zones, to test ductwork airtightness and to help physically locate air leakage sites in the building envelope.

There are three primary components to a blower door: (1) a calibrated, variable-speed fan, capable of inducing a range of airflows sufficient to pressurize and depressurize a variety of building sizes, (2) a pressure measurement instrument, called a manometer, to simultaneously measure the pressure differential induced across the face of the fan and across the building envelope, as a result of fan airflow, and (3) a mounting system, used to mount the fan in a building opening, such as a door or a window.
