## Indiana Department of Natural Resources Division of Forestry State Forest Resource Management Guide Public Comment Summary SUMMARY COMMENTS

## Pike State Forest, Comp 12 Tract 7

30 Day Comment Period Ending: 7/30/2024

## Comments Received: 6

The table below is a summary of public comments received concerning the draft Resource Management Guide(s). The public comments received have been reviewed in their entirety and given due consideration summarized in the Division of Forestry response below.

Comment Summary	Division of Forestry Response
<ul> <li>General concern with active forest management on state forests, more specifically timber removal, carbon storage, old growth conditions, rare, threatened, and endangered flora and fauna, invasive species, and recreation.</li> <li>Concern that more than 97% of 160,000-acre state forest system is under a timber harvest rotation.</li> <li>Concern with the division's strategic direction.</li> <li>Concern with linking management guides to timber sales.</li> <li>Concern with water quality, specifically Patoka River.</li> </ul>	<ul> <li>Compartment 12 Tract 7 is a 192-acre tract. As outlined in the Summary Tract Silvicultural Prescription and Proposed Activities section of the resource management guide approximately 65 acres in the central portion of the tract would receive the prescribed management. Indicating nearly 130 acres of the tract is excluded from the prescribed management (i.e., timber harvest).</li> <li>The Division of Forestry has actively managed its lands for more than 120 years. This management has been a multiple uses multiple benefits approach. These benefits include timber production, biodiversity, watershed protection, recreation, wildlife habitat, and research areas. Recreational benefits include over 430 miles of designated recreational trails (e.g., horse, bike, hike and interpretive), over 500 individual camping options that include family and horse camp sites, rent-a-camp cabins, and family cabins. In addition, state forests offer dispersed primitive camping along three major hiking trails covering 125 miles, a swimming beach, shooting &amp; archery range, hunting, trapping, fishing, boating, caving, picnicking, mushrooming, and many other opportunities under this management philosophy across more than 160,000 acres.</li> </ul>

State Forest management is guided by science and ٠ implementation of sound silvicultural principles. They are managed under the principle that we're stewards of this land for the future. This work is guided through legislation and comprehensive scientific national and international forest certification standards which are independently audited to help insure long-term forest health, resiliency, and sustainability. Forest Certification Silvicultural prescriptions proposed in draft RMGs go through ٠ an ecological review process. This process includes a review of the National Heritage Database (NHD) and staff reviews by the divisions forest wildlife specialist and forest ecologist/botanist. Further information on direct and indirect impacts on species and habitats can be found in the Indiana State Forest **Environmental Assessment.** Detailed flora and fauna inventories are beyond the scope of ٠ tract level management guides. Habitats, communities, and species are considered as part of the management planning process. Along with field observations, NHD review for threatened or endangered species (federally and state) on or near the management unit are considered. *Please note, for* the protection of sensitive flora and fauna NHD review results are not disclosed in draft RMGs. Further information on direct and indirect impacts on species and habitats can be found in the Indiana State Forest Environmental Assessment. Implementation of RMGs utilize guidance from the US Fish & Wildlife Service on federally listed species known to occur on state forests.

consideration when managing within high-use public areas or high-use recreational facilities. During active management some sections of recreational trails may require temporary closure or rerouting for public safety. Those sections reopen following the completion of work. As outlined in the Recreation section of the resource management guide, there are no designated recreational trails in this tract. Invasive species, their presence and control, are evaluated as ٠ part of the property's normal operations. Treatments may occur prior to or following a timber harvest, or situational based on their presence within the county. Treatments range from minor to aggressive utilizing a variety of methods such as manual, mechanical, chemical, prescribed fire, or a combination. Only approved herbicides are used following forest certification standards and chemical labels. Best Management Practices (BMP) will be implemented and monitored to address the soil erosion and sedimentation concerns. BMPs are required and included in each timber sale contract on state forests. The Division of Forestry will respond to reported BMP departures. 2022 BMP Field Guide BMPs are guidelines, not law. However, contractual • stipulations require BMPs to be implemented and followed on all State Forests. State Forest staff perform regular site visits during active operations and evaluate as part of their postharvest review. Additionally, BMP monitoring is performed on each harvest for application and effectiveness. There are 58 individual BMPs measured across 5 categories: access/haul road, log landings or yards, skid trails, stream crossings, and

<ul> <li>Monitoring Results for State Forest Properties 1996-2023</li> <li>Assessing climate change and carbon sequestration is beyond the scope of tract level resource management guides. See Forest Carbon Assessment for Indiana State Forests</li> <li>State Forest timber sales are made available to the public on the Indiana Forestry Exchange. Each state forest timber sale listed provides detailed information about the sale including the associated resource management guide(s).</li> <li>The Division of Forestry is working under an extension of the 2015 – 2022 strategic direction while an updated version is finalized. This is a voluntary document used to guide programs over a certain period. These processes take time to maneuver when considering all aspects required.</li> <li>The number of timber sales sold per year, acres impacted by timber sales, trees sold, and board feet sold has decreased over the past 15 years.</li> <li>State forest timber sales support local markets throughout the statewide and abroad. The statute does not imply only local markets or how a buyer must market material. Materials removed from state forests are certified globally recognized as material coming from well managed forests.</li> </ul>	riparian management zones (RMZ). View results <u>BMP</u>
