

2024

The Indiana Public Retirement System is a component unit and a pension trust fund of the State of Indiana.

ANNUAL COMPREHENSIVE FINANCIAL REPORT

For the Fiscal Year Ended June 30, 2024

Prepared through the joint efforts of INPRS's team members. Available online at www.in.gov/inprs

2024 ANNUAL COMPREHENSIVE FINANCIAL REPORT

For the Fiscal Year Ended June 30, 2024

INPRS is a component unit and a pension trust fund of the State of Indiana.

INPRS is a trust and an independent body corporate and politic. The system is not a department or agency of the state, but is an independent instrumentality exercising essential governmental functions (IC 5-10.5-2-3).

FUNDS MANAGED BY INPRS

Defined Benefit

1. Public Employees' Defined Benefit Account
2. Teachers' Pre-1996 Defined Benefit Account
3. Teachers' 1996 Defined Benefit Account
4. 1977 Police Officers' and Firefighters' Retirement Fund
5. Judges' Retirement System
6. Excise, Gaming and Conservation Officers' Retirement Fund
7. Prosecuting Attorneys' Retirement Fund
8. Legislators' Defined Benefit Fund

Defined Contribution

9. Public Employees' Defined Contribution Account
10. My Choice: Retirement Savings Plan for Public Employees
11. Teachers' Defined Contribution Account
12. My Choice: Retirement Savings Plan for Teachers
13. Legislators' Defined Contribution Fund

Other Post Employment Benefit

14. Special Death Benefit Fund
15. Retirement Medical Benefits Account Plan

Custodial

16. Local Public Safety Pension Relief Fund

189	Legislators' Defined Benefit Fund

\$5.9 Billion Unfunded Actuarial Accrued Liability

Excluding TRF 'Pre 96 DB

127.1 Percent ADC Contributed

For the four funds that are funded through percent of payroll contributions

Introduction to Actuarial Information

Purpose of the Actuarial Section

Funding methods used for the defined benefit retirement plans are not governed by and do not conform to GASB Statement No. 67, so the actuary prepares two actuarial valuations for each of the pension plans. One is an actuarial valuation used for financial reporting purposes, which conforms to GASB Statement No. 67 (Financial Section) and the second is an actuarial valuation used for funding purposes (Actuarial Section), which follows generally accepted actuarial principles and the Actuarial Standards of Practice issued by the Actuarial Standards Board. Actuarial methods and assumptions utilized to prepare the two actuarial valuations are nearly identical, with the primary difference being the method of valuation of the pension assets. In 2024, INPRS published an actuarial risk analysis report that highlights many of the actuarial-related risks faced by INPRS funds. It is available on the [actuarial reports page](#) of the INPRS website. Amounts presented in the Actuarial Section may differ from the amounts presented for financial reporting purposes in the Financial Section. For defined benefit pension plans that are administered through a trust or equivalent arrangement the actuarial section references the ten-year schedule of actuarially determined and actual contributions provided as required supplementary information.

Actuarial services are provided by CavMac.

Accompanying Notes to the Actuarial Schedules

The following details are intended to clarify certain values presented in the actuarial schedules:

- The Unfunded Actuarial Accrued Liability (UAAL) is calculated using the Actuarial Value of Assets (AVA), which is different from the Net Pension Liability in the Financial Section which uses the Plan Fiduciary Net Position, also known as the Fair Value of Assets (FVA).
- Actuarial Accrued Liabilities Experience represents actual experience versus expected experience of the actuarial census assumptions. One factor was the unanticipated changes to the member census data, particularly actual salary growth greater than assumed from the prior measurement. In JRS there was a 3.00% COLA, rather than the assumed COLA of 2.65%. In the '77 Fund there was a 3.00% COLA, rather than the assumed COLA of 1.95%.
- Covered Employee Payroll can also be found in the RSI Contribution Schedule in the Financial Section (LE DB is a closed plan with no Covered Employee Payroll).
- Valuation results were calculated using the prior year census data, adjusted for certain activity during the fiscal year.
- End of year benefits are not equal to prior year end annual benefits plus additions less removals due to beneficiary benefit changes, data changes, and COLA increases on the Schedule of Retirants and Beneficiaries.
- Annual Payroll figures shown on the Schedule of Active Members Valuation Data are the anticipated pay for the one-year period following the valuation date.
- In 2018 and 2023 there were changes in methodologies impacting Average Annual Pay.

For PERF DB, TRF Pre-'96 DB, and TRF '96 DB the additional information should be considered:

- Annual benefits include amounts for members who selected to annuitize their ASA (i.e. DC balance).
- Effective January 1, 2018, members can no longer use their DC balances to increase their DB payments. For the solvency test, DC account balances are treated as a separate DC plan.

October 23, 2024

Board of Trustees
Indiana Public Retirement System
1 North Capitol, Suite 001
Indianapolis, IN 46204

Dear Members of the Board:

At your request, we performed the annual actuarial valuations of the eight defined benefit plans administered by the Indiana Public Retirement System (INPRS): the Public Employees' Retirement Fund (PERF DB), the Teachers' Pre-1996 Account (TRF Pre-'96 DB), the Teachers' 1996 Account (TRF '96 DB), the 1977 Police Officers' and Firefighters' Retirement Fund ('77 Fund), the Judges' Retirement System (JRS), the Excise, Gaming and Conservation Officers' Retirement Fund (EG&C), Prosecuting Attorneys' Retirement Fund (PARF), and the Legislators' Defined Benefit Fund (LE DB). These valuations are as of June 30, 2024, for the purpose of estimating the actuarial required contribution for the plan years ending in calendar year 2026 (either June 30 or December 31), along with the actuarial surcharge rate or equivalent amounts for applicable plans (PERF DB, TRF Pre-'96 DB, TRF '96 DB, EG&C, and LE DB) for the 2025 and 2026 calendar years, and reflect the benefit and funding provisions in place on June 30, 2024.

Basis of the Valuations

In preparing our valuation, we relied, without audit, on information (some oral and some in writing) supplied by INPRS staff. This information includes, but is not limited to, statutory provisions, member data and financial information. We did review the data to ensure that it was reasonably consistent and comparable with data from prior years. The valuation results depend on the integrity of this information. If any of this information is inaccurate or incomplete, our results may be different and our calculations may need to be revised.

We certify that all costs and liabilities for the funds have been determined on the basis of actuarial assumptions and methods which are individually reasonable (taking into account the experience of the plan and reasonable expectations); and which, in combination, offer the best estimate of anticipated experience affecting the plan. The cost determinations and the contribution policies of the Board are anticipated to systematically fund the promised benefits. Nevertheless, the emerging costs will vary from those presented in this report to the extent actual experience differs from that projected by the actuarial assumptions.

Actuarial Methods and Assumptions

We believe the actuarial assumptions used herein are reasonable, individually and in the aggregate. The Board has the final decision regarding the appropriateness of the assumptions and adopted them as indicated in Appendix C of the valuation reports. Specifically, we presented the proposed assumptions for the 2024 valuations to the Board on February 16, 2024, and the

Board of Trustees
October 23, 2024
Page 2

Board subsequently adopted their use at its April 26, 2024 meeting. These assumptions are applicable to both the funding and Governmental Accounting Standards Board (GASB) Statement Number 67 valuation calculations, unless otherwise noted.

In order to prepare the results in this report, we have utilized actuarial models that were developed to measure liabilities and develop actuarial costs. These models include tools that we have produced and tested, along with commercially available valuation software that we have reviewed to confirm the appropriateness and accuracy of the output. In utilizing these models, we develop and use input parameters and assumptions about future contingent events along with recognized actuarial approaches to develop the needed results. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of our assignment, we did not perform an analysis of the potential range of future measurements.

We prepared a Risk Report for the INPRS Board in July 2024 that contains information which is relevant for these plans and should be considered part of this valuation report. Although the report was prepared using the data, methods, and assumptions of the June 30, 2023 valuation report, it is our professional opinion that the general results of the risk report are applicable to the June 30, 2024 valuation report as well.

Actuarial computations presented in this report are for purposes of determining the funding rates for the Plan. The calculations in the enclosed report have been made on a basis consistent with our understanding of the Plan's funding requirements and goals as adopted by the Board and satisfy the guidance set forth in the applicable Actuarial Standards of Practice. Additionally, we have included actuarial computations for use in preparing certain reporting and disclosure requirements under Governmental Accounting Standards Board Statements Number 67 and Number 68. Determinations for purposes other than meeting these funding and disclosure requirements may be significantly different from the results contained in this report and require additional analysis.

Certification

We certify that the information presented herein accurately and fairly discloses the actuarial position of each fund and the System as a whole, based on the underlying census data and asset information provided by INPRS, using the assumptions and methods approved by the Board. This annual report, prepared as of June 30, 2024, provides data and tables that we prepared for use in the following sections of the ACFR:

Financial Section:

- Note 1 - Tables of Plan Membership
- Note 8 - Net Pension Liability and Actuarial Information - Defined Benefit Plans
- Schedule of Changes in Net Pension Liability and Plan Fiduciary Net Position
- Schedule of Contributions
- Schedule of Notes to Required Supplementary Information

Board of Trustees
October 23, 2024
Page 3

Actuarial Section:

- Summary of Funded Status
- Historical Summary of Actuarial Valuation Results by Retirement Plan
- Summary of Actuarial Assumptions, Methods and Plan Provisions
- Analysis of Financial Experience
- Solvency Test
- Schedule of Active Member Valuation Data
- Schedule of Retirants and Beneficiaries
-

Statistical Section:

- Membership Data 10-Year Summary
- Ratio of Active Members to Annuitants
- Schedule of Defined Benefit Recipients by Type of Benefit Option
- Schedule of Average Benefit Payments

The consultants who worked on this assignment are pension actuaries. Cavanaugh Macdonald's advice is not intended to be a substitute for qualified legal or accounting counsel.

On the basis of the foregoing, we hereby certify that, to the best of our knowledge and belief, this report is complete and accurate, and the assumptions and methods used meet the guidance provided in the applicable Actuarial Standards of Practice. We are members of the American Academy of Actuaries and meet the Qualification Standards to render the actuarial opinion contained herein.

The calculations were completed in compliance with applicable law and the calculations for GASB disclosure, in our opinion, meet the requirements of GASB 67 and GASB 68. We are available to answer any questions on the material contained in the report, or to provide explanations or further details as may be appropriate.

We respectfully submit the following exhibits.

Sincerely,

Brent A. Banister, PhD, FSA, EA, FCA, MAAA
Chief Actuary

Edward Koebel, FCA, EA, MAAA
Chief Executive Officer

Virginia Fritz, FSA, EA, FCA, MAAA
Senior Actuary

¹ Sum of employers does not equal total, as an employer may participate in multiple retirement funds.

² The Total was adjusted to treat the State and its component units as one employer.

Combined Defined Benefit Funds, continued

Demonstration of Asset Smoothing

Actuarial Valuation as of June 30 ¹

INPRS's funding policy smooths asset gains and losses to form an actuarial value of assets. The graph below demonstrates the reduction in volatility from this smoothing by comparing the actuarial value of assets to the historical rates of return for the fair value of assets and expected return for PERF DB. PERF DB is shown as a representative example of all defined benefit funds.

¹ See Accompanying Notes to the Actuarial Schedules, included in the Introduction to Actuarial Information.

Public Employees' Defined Benefit Account, continued

Summary of Actuarial Assumptions, Actuarial Methods, and Plan Provisions

The actuarial assumptions and methods used in the June 30, 2024 valuation of the Public Employees' Defined Benefit Account were adopted by the INPRS Board in April 2024. The majority of the actuarial assumptions and methods are based on plan experience from July 1, 2014 through June 30, 2019, and were first used in the June 30, 2020 valuation. The INPRS Board adopted a funding policy in April 2014, and the policy was last updated in October 2024.

The funding policy is available online at: www.in.gov/inprs/publications/.

Changes in Actuarial Assumptions

The COLA assumption was revised following the passage of HEA 1004-2024.

Changes in Actuarial Methods

Pursuant to Section 5 of HEA 1004-2024, the 1% cap on the surcharge rates was removed. The surcharge rates may not decrease, but may increase by no more than 0.1% of payroll per year. This section expires 12/31/2029. The surcharge rate method was significantly revised following the passage of HEA 1004-2024.

Changes in Plan Provisions

A 13th check to be paid in fiscal year 2025 was granted. For the actuarial valuation as of June 30, 2024, the postretirement benefit increase assumption was changed due to the passage of House Enrolled Act No. 1004. In lieu of a select and ultimate COLA assumption of 0.4% until 2034, 0.5% until 2039, and 0.6% in 2039 and thereafter, the act requires supplemental benefit funding for an inflation-indexed 13th check for participants who commence prior to July 1, 2025 and a 1% COLA for commencements thereafter. No additional benefits have yet been granted beyond this fiscal year 2025 13th check.

Actuarial Assumptions

Actuarial assumptions used for funding purposes are the same as those used for accounting and financial reporting, except where noted.

Economic Assumptions

Interest Rate / Investment Return:

Funding	6.25 percent (net of administrative and investment expenses)
Accounting & Financial Reporting	6.25 percent (net of investment expenses)

Inflation: 2.00 percent per year

Cost of Living Increases: A one-time 13th check was granted and payable by October 1, 2024. Thereafter, the following annual cost of living adjustments are assumed:
For members retired before 7/1/2025 - indexed 13th checks, increasing 2% per year
For members retired on or after 7/1/2025 - 1.0% COLAs, compounded annually

50	0.160	0.124
55+	0.300	0.200

Spouse/Beneficiary: 80 percent of male members and 65 percent of female members are assumed to be married and or to have a dependent beneficiary. Male members are assumed to be three (3) years older than their spouses and female members are assumed to be two (2) years younger than their spouses.

Form of Payment: 100 percent of members are assumed to elect the normal form of benefit payment, a single life annuity with a five-year certain period.

Miscellaneous Adjustments: For active members, the Average Annual Compensation was increased by \$200 for additional wages received upon termination, such as severance or unused sick leave.

Public Employees' Defined Benefit Account, continued

Actuarial Methods

Funding uses the same Actuarial Methods as accounting and financial reporting, except where noted.

Actuarial Cost Method: Entry Age Normal -- Level Percent of Payroll

The normal cost is calculated separately for each active member and is equal to the level percentage of payroll needed as an annual contribution from entry age to retirement age to fund projected benefits. The actuarial accrued liability on any valuation date is the accumulated value of such normal costs from entry age to the valuation date.

This method produces a cost of future benefit accruals that is a level percent of pay over time, which is more desirable for employers from a budgeting standpoint. Other actuarial cost methods are more volatile in their allocation of cost for each year of member service.

Amortization Method:

For funding, gains and losses occurring from census experience different than assumed, assumption changes, and benefit changes are amortized over a 20-year period with level payments each year. A new gain or loss base is established each year on the additional gain or loss during that year and that base is amortized over a new 20-year period. However, when the plan is at or above 100 percent funded (based on Actuarial Value of Assets), the past amortization bases are considered fully amortized and a single amortization base equal to the surplus is amortized over a 30-year period with level payment each year. Effective June 30, 2018, the bases are calculated without regard to the COLA provisions. The purpose of the method is to give a smooth progression of the costs from year-to-year and, at the same time, provide for an orderly funding of the unfunded liabilities.

For accounting and financial reporting, gains and losses occurring from census experience different than assumed and assumption changes are amortized into expense over the average expected future service of all plan participants. Gains and losses occurring from investment experience different than assumed are amortized into expense over a five-year period. The effect of plan changes on the plan liability are fully recognized in expense in the year in which they occur.

Data Measurement Date:

Member census data as of the prior year end was used in the valuation and adjusted, where appropriate, to reflect changes during the current fiscal year. Standard actuarial roll forward techniques were then used to project the liabilities computed as of prior year end to the current year measurement date.

COLA Surcharge:

The surcharge rate is based on the same normal cost and amortization method as is being used for the base benefits, effective with the 2024 valuation which is required by HEA 1004-2024 to begin funding for an inflation-indexed 13th check and 1% COLA. These benefits have not been granted or promised beyond a 13th check payable in Fiscal Year 2025.

Asset Valuation Method:

Funding uses the Actuarial Value of Assets (AVA), which is equal to a five-year smoothing of gains and losses on the Fair Value of Assets (FVA), subject to a 20 percent corridor. Accordingly, the AVA is limited to no more than 20 percent greater than or 20 percent less than the FVA.

Accounting and financial reporting uses the FVA in accordance with GASB Statement No. 67.

Plan Provisions

Please refer to Note 1 of the Notes to the Financial Statements in the Financial Section, the actuarial valuation at <https://www.in.gov/inprs/actuarialvaluation.htm>, or the applicable Indiana Code at <http://iga.in.gov/>.

Teachers' Pre-1996 Defined Benefit Account, continued

Summary of Actuarial Assumptions, Actuarial Methods and Plan Provisions

The actuarial assumptions and methods used in the June 30, 2024 valuation of the Teachers' Pre-1996 Defined Benefit Account were adopted by the INPRS Board in April 2024. The majority of the actuarial assumptions and methods are based on plan experience from July 1, 2014 through June 30, 2019, and were first used in the June 30, 2020 valuation. The INPRS Board adopted a funding policy in April 2014, and the policy was last updated in October 2024.

The funding policy is available online at: www.in.gov/inprs/publications/.

Changes in Actuarial Assumptions

The COLA assumption was revised following the passage of HEA 1004-2024.

Changes in Actuarial Methods

Pursuant to Section 5 of HEA 1004-2024, the 1% cap on the surcharge rates was removed. The surcharge rates may not decrease, but may increase by no more than 0.1% of payroll per year. This section expires 12/31/2029. The surcharge rate method was significantly revised following the passage of HEA 1004-2024.

Changes in Plan Provisions

A 13th check to be paid in fiscal year 2025 was granted. For the actuarial valuation as of June 30, 2024, the postretirement benefit increase assumption was changed due to the passage of House Enrolled Act No. 1004. In lieu of a select and ultimate COLA assumption of 0.4% until 2034, 0.5% until 2039, and 0.6% in 2039 and thereafter, the act requires supplemental benefit funding for an inflation-indexed 13th check for participants who commence prior to July 1, 2025 and a 1% COLA for commencements thereafter. No additional benefits have yet been granted beyond this fiscal year 2025 13th check.

Actuarial Assumptions

Actuarial assumptions used for funding purposes are the same as those used for accounting and financial reporting, except where noted.

Economic Assumptions

Interest Rate / Investment Return:

Funding	6.25 percent (net of administrative and investment expenses)
Accounting & Financial Reporting	6.25 percent (net of investment expenses)

Inflation: 2.00 percent per year

Cost of Living Increases: A one-time 13th check was granted and payable by October 1, 2024. Thereafter, the following annual cost of living adjustments are assumed:

For members retired before 7/1/2025 - indexed 13th checks, increasing 2% per year

For members retired on or after 7/1/2025 - 1.0% COLAs, compounded annually

Teachers' Pre-1996 Defined Benefit Account, continued

Future Salary Increases:

Based on 2015-2019 experience. Illustrative rates shown below:

Years of Service	Merit	Wage Inflation	Total Individual Salary Growth
0-1	9.25 %	2.65 %	11.90 %
2	4.25	2.65	6.90
3	2.75	2.65	5.40
4-14	1.75	2.65	4.40
15	1.50	2.65	4.15
16	1.25	2.65	3.90
17	1.00	2.65	3.65
18	0.75	2.65	3.40
19	0.50	2.65	3.15
20	0.25	2.65	2.90
21+	—	2.65	2.65

Demographic Assumptions: Based on 2015-2019 Experience

Pub-2010 Public Retirement Plans Mortality Tables (Amount-Weighted) with a fully generational projection of mortality improvements using SOA Scale MP-2019.

Mortality (Healthy):	Teacher Employee table with a 1 year set forward for males and a 1 year set forward for females.
Mortality (Retirees):	Teacher Retiree table with a 1 year set forward for males and a 1 year set forward for females.
Mortality (Beneficiaries):	Contingent Survivor table with no set forward for males and a 2 year set forward for females.
Mortality (Disabled):	General Disabled table with a 140% load.

Retirement:

Age	Eligible for Reduced Retirement	Eligible for Unreduced Retirement
	Probability	Probability
50-53	2.0 %	N/A
54	5.0	N/A
55-56	5.0	15.0 %
57	6.5	15.0
58	8.0	15.0
59	12.0	15.0
60	N/A	15.0
61	N/A	20.0
62	N/A	25.0
63	N/A	30.0
64	N/A	35.0
65-74	N/A	40.0
75+	N/A	100.0

If eligible for a reduced early retirement benefit upon termination from employment, 30 percent of active members are assumed to commence immediately and 70 percent are assumed to defer to their earliest unreduced retirement age.

If eligible for an unreduced retirement benefit upon termination from employment, 100 percent of active members are assumed to commence immediately.

Inactive vested members are assumed to commence their retirement benefit at their earliest unreduced retirement date.

Termination:

Years of Service	Service Based	
	Male	Female
0	15.00 %	12.50 %
1	13.00	11.50
2	11.00	10.50

50	0.034
55	0.061
56-65	0.070
66+	0.000

Spouse / Beneficiary:

80% of male members and 75% of female members are assumed to be married. Males are assumed to be three (3) years older and females are assumed to be two (2) years younger than their spouses.

Form of Payment

100% of members are assumed to elect the normal form of benefit payment, a single life annuity with a five-year certain period.

Miscellaneous Adjustments:

For active members, the Average Annual Compensation was increased by \$200 for additional wages received upon termination, such as severance or unused sick leave.

Teachers' Pre-1996 Defined Benefit Account, continued

Actuarial Methods

Funding uses the same Actuarial Methods as accounting and financial reporting, except where noted.

Actuarial Cost Method: Entry Age Normal – Level Percent of Payroll

The normal cost is calculated separately for each active member and is equal to the level percentage of payroll needed as an annual contribution from entry age to retirement age to fund projected benefits. The actuarial accrued liability on any valuation date is the accumulated value of such normal costs from entry age to the valuation date.

This method produces a cost of future benefit accruals that is a level percent of pay over time, which is desirable for employers from a budgeting standpoint. Other actuarial cost methods are more volatile in their allocation of cost for each year of member service.

Actuarially Determined Contribution: The Fund's actuarially determined contribution is based on the approach set out in IC - 5.10.4-2-5 that the Indiana Legislature has followed in actually appropriating funds. The basic contribution is the lesser of 3% above the prior year's basic contribution and the anticipated base benefit payments for the year. However, the contributed funds should not result in the funded ratio exceeding 100%.

Amortization Method: For accounting and financial reporting, gains and losses occurring from census experience different than assumed and assumption changes are amortized into expense over the average expected future service of all plan participants. Gains and losses occurring from investment experience different than assumed are amortized into expense over a five-year period. The effect of plan changes on the plan liability are fully recognized in expense in the year in which they occur.

Data Measurement Date: Member census data as of the prior year end was used in the valuation and adjusted, where appropriate, to reflect changes during the current fiscal year. Standard actuarial roll forward techniques were then used to project the liabilities computed as of prior year end to the current year measurement date.

COLA Funding Amount: The surcharge rate is based on the same normal cost and amortization method as is being used for the base benefits, effective with the 2024 valuation which is required by HEA 1004-2024 to begin funding for an inflation-indexed 13th check and 1% COLA. For TRF Pre-'96, these amounts are compared with the expected contribution amounts to ensure that benefit funding adequacy will be met. These benefits have not been granted or promised beyond a 13th check payable in Fiscal Year 2025.

Asset Valuation Method: Funding uses the Actuarial Value of Assets (AVA), which is equal to a five-year smoothing of gains and losses on the Fair Value of Assets (FVA), subject to a 20 percent corridor. Accordingly, the AVA is limited to no more than 20 percent greater than or 20 percent less than the FVA.

Accounting and financial reporting uses the FVA in accordance with GASB Statement No. 67.

Plan Provisions

Please refer to Note 1 of the Notes to the Financial Statements in the Financial Section, the actuarial valuation at <https://www.in.gov/inprs/actuarialvaluation.htm>, or the applicable Indiana Code at <http://iga.in.gov/>.

Teachers' 1996 Defined Benefit Account, continued

Summary of Actuarial Assumptions, Actuarial Methods and Plan Provisions

The actuarial assumptions and methods used in the June 30, 2024 valuation of the Teachers' 1996 Defined Benefit Account were adopted by the INPRS Board in April 2024. The majority of the actuarial assumptions and methods are based on plan experience from July 1, 2014 through June 30, 2019, and were first used in the June 30, 2020 valuation. The INPRS Board adopted a funding policy in April 2014, and the policy was last updated in October 2024.

The funding policy is available online at: www.in.gov/inprs/publications/.

Changes in Actuarial Assumptions

The COLA assumption was revised following the passage of HEA 1004-2024.

Changes in Actuarial Methods

Pursuant to Section 5 of HEA 1004-2024, the 1% cap on the surcharge rates was removed. The surcharge rates may not decrease, but may increase by no more than 0.1% of payroll per year. This section expires 12/31/2029. The surcharge rate method was significantly revised following the passage of HEA 1004-2024.

Changes in Plan Provisions

A 13th check to be paid in fiscal year 2025 was granted. For the actuarial valuation as of June 30, 2024, the postretirement benefit increase assumption was changed due to the passage of House Enrolled Act No. 1004. In lieu of a select and ultimate COLA assumption of 0.4% until 2034, 0.5% until 2039, and 0.6% in 2039 and thereafter, the act requires supplemental benefit funding for an inflation-indexed 13th check for participants who commence prior to July 1, 2025 and a 1% COLA for commencements thereafter. No additional benefits have yet been granted beyond this fiscal year 2025 13th check.

Actuarial Assumptions

Actuarial assumptions used for funding purposes are the same as those used for accounting and financial reporting, except where noted.

Economic Assumptions

Interest Rate / Investment Return:

Funding	6.25 percent (net of administrative and investment expenses)
Accounting & Financial Reporting	6.25 percent (net of investment expenses)

Inflation: 2.00 percent per year

Cost of Living Increases: A one-time 13th check was granted and payable by October 1, 2024. Thereafter, the following annual cost of living adjustments are assumed:
For members retired before 7/1/2025 - indexed 13th checks, increasing 2% per year
For members retired on or after 7/1/2025 - 1.0% COLAs, compounded annually

Teachers' 1996 Defined Benefit Account, continued

Future Salary Increases:

Based on 2015-2019 experience. Illustrative rates shown below:

Years of Service	Merit	Wage Inflation	Total Individual Salary Growth
0-1	9.25 %	2.65 %	11.90 %
2	4.25	2.65	6.90
3	2.75	2.65	5.40
4-14	1.75	2.65	4.40
15	1.50	2.65	4.15
16	1.25	2.65	3.90
17	1.00	2.65	3.65
18	0.75	2.65	3.40
19	0.50	2.65	3.15
20	0.25	2.65	2.90
21+	—	2.65	2.65

Demographic Assumptions: Based on 2015-2019 Experience

Pub-2010 Public Retirement Plans Mortality Tables (Amount-Weighted) with a fully generational projection of mortality improvements using SOA Scale MP-2019.

Mortality (Healthy):	Teacher Employee table with a 1 year set forward for males and a 1 year set forward for females.
Mortality (Retirees):	Teacher Retiree table with a 1 year set forward for males and a 1 year set forward for females.
Mortality (Beneficiaries):	Contingent Survivor table with no set forward for males and a 2 year set forward for females.
Mortality (Disabled):	General Disabled table with a 140% load.

Retirement:

Age	Eligible for Reduced Retirement	Eligible for Unreduced Retirement
	Probability	Probability
50-53	2.0 %	N/A
54	5.0	N/A
55-56	5.0	15.0 %
57	6.5	15.0
58	8.0	15.0
59	12.0	15.0
60	N/A	15.0
61	N/A	20.0
62	N/A	25.0
63	N/A	30.0
64	N/A	35.0
65-74	N/A	40.0
75+	N/A	100.0

If eligible for a reduced early retirement benefit upon termination from employment, 30 percent of active members are assumed to commence immediately and 70 percent are assumed to defer to their earliest unreduced retirement age.

If eligible for an unreduced retirement benefit upon termination from employment, 100 percent of active members are assumed to commence immediately.

Inactive vested members are assumed to commence their retirement benefit at their earliest unreduced retirement date.

Termination:

Years of Service	Service Based	
	Male	Female
0	15.00 %	12.50 %
1	13.00	11.50
2	11.00	10.50
3	9.00	9.50

10	3.75	4.00
11	3.50	3.50
12	3.25	3.25
13	3.00	3.00
14	2.75	2.75
15	2.50	2.50
16+	2.25	2.25

Teachers' 1996 Defined Benefit Account, continued

Disability:

Age	Sample Rates
<=36	0.005 %
40	0.009
45	0.014
50	0.034
55	0.061
56-65	0.070
66+	0.000

Spouse / Beneficiary:

80% of male members and 75% of female members are assumed to be married. Males are assumed to be three (3) years older and females are assumed to be two (2) years younger than their spouses.

Form of Payment

100% of members are assumed to elect the normal form of benefit payment, a single life annuity with a five-year certain period.

Miscellaneous Adjustments:

For active members, the Average Annual Compensation was increased by \$200 for additional wages received upon termination, such as severance or unused sick leave.

Teachers' 1996 Defined Benefit Account, continued

Actuarial Methods

Funding uses the same Actuarial Methods as accounting and financial reporting, except where noted.

Actuarial Cost Method: Entry Age Normal – Level Percent of Payroll

The normal cost is calculated separately for each active member and is equal to the level percentage of payroll needed as an annual contribution from entry age to retirement age to fund projected benefits. The actuarial accrued liability on any valuation date is the accumulated value of such normal costs from entry age to the valuation date.

This method produces a cost of future benefit accruals that is a level percent of pay over time, which is desirable for employers from a budgeting standpoint. Other actuarial cost methods are more volatile in their allocation of cost for each year of member service.

Amortization Method: For funding, gains and losses occurring from census experience different than assumed, assumption changes, and benefit changes are amortized over a 20-year period with level payments each year. A new gain or loss base is established each year based on the additional gain or loss during that year and that base is amortized over a new 20-year period. However, when the plan is at or above 100 percent funded (based on Actuarial Value of Assets), the past amortization bases are considered fully amortized and a single amortization base equal to the surplus is amortized over a 30-year period with level payment each year. Effective June 30, 2018, the bases are calculated without regards to the COLA provisions. The purpose of the method is to give a smooth progression of the costs from year-to-year and, at the same time, provide for an orderly funding of the unfunded liabilities.

For accounting and financial reporting, gains and losses occurring from census experience different than assumed and assumption changes are amortized into expense over the average expected future service of all plan participants. Gains and losses occurring from investment experience different than assumed are amortized into expense over a five-year period. The effect of plan changes on the plan liability are fully recognized in expense in the year in which they occur.

Data Measurement Date: Member census data as of the prior year end was used in the valuation and adjusted, where appropriate, to reflect changes during the current fiscal year. Standard actuarial roll forward techniques were then used to project the liabilities computed as of prior year end to the current year measurement date.

COLA Surcharge: The surcharge rate is based on the same normal cost and amortization method as is being used for the base benefits, effective with the 2024 valuation which is required by HEA 1004-2024 to begin funding for an inflation-indexed 13th check and 1% COLA. These benefits have not been granted or promised beyond a 13th check payable in Fiscal Year 2025.

Asset Valuation Method: Funding uses the Actuarial Value of Assets (AVA), which is equal to a five-year smoothing of gains and losses on the Fair Value of Assets (FVA), subject to a 20 percent corridor. Accordingly, the AVA is limited to no more than 20 percent greater than or 20 percent less than the FVA.

Accounting and financial reporting uses the FVA in accordance with GASB Statement No. 67.

Plan Provisions

Please refer to Note 1 of the Notes to the Financial Statements in the Financial Section, the actuarial valuation at <https://www.in.gov/inprs/actuarialvaluation.htm>, or the applicable Indiana Code at <http://iga.in.gov/>.

1977 Police Officers' and Firefighters' Retirement Fund, continued

Summary of Actuarial Assumptions, Actuarial Methods and Plan Provisions

The actuarial assumptions and methods used in the June 30, 2024 valuation of the 1977 Police Officers' and Firefighters' Retirement Fund were adopted by the INPRS Board in April 2024. The majority of the actuarial assumptions and methods are based on plan experience from July 1, 2014 through June 30, 2019, and were first used in the June 30, 2020 valuation. The INPRS Board adopted a funding policy in April 2014, and the policy was last updated in October 2024.

The funding policy is available online at: www.in.gov/inprs/publications/.

Changes in Actuarial Assumptions

Retirement rates were updated based on the change in statute extending the DROP election period from 3 years to 5 years.

Changes in Actuarial Methods

There were no changes to the actuarial methods during the fiscal year.

Changes in Plan Provisions

HEA 1004-2024 increased the maximum drop period from 3 years to 5 years.

Actuarial Assumptions

Actuarial assumptions used for funding purposes are the same as those used for accounting and financial reporting, except where noted.

Economic Assumptions

Interest Rate / Investment Return:

Funding	6.25 percent (net of administrative and investment expenses)
Account & Financial Reporting	6.25 percent (net of investment expenses)
Interest on Member Contributions	3.30 percent per year
Inflation	2.00 percent per year
Cost of Living Increases:	1.95 percent per year in retirement
Future Salary Increases:	2.65 percent per year

Demographic Assumptions: Based on 2015-2019 Experience

Pub-2010 Public Retirement Plans Mortality Tables (Amount-Weighted) with a fully generational projection of mortality improvements using SOA Scale MP-2019.

Mortality (Healthy):	Safety Employee table with a 3 year set forward for males and no set forward for females.
Mortality (Retirees):	Safety Retiree table with a 3 year set forward for males and no set forward for females.
Mortality (Beneficiaries):	Contingent Survivor table with no set forward for males and a 2 year set forward for females.
Mortality (Disabled):	General Disabled table.

1977 Police Officers' and Firefighters' Retirement Fund, continued

Retirement:	Retirement Rate		Of those who retire		
	Ages	Rate	Service	Enter DROP	Commence Immediately
	50-51	5.0%	<=20	35 %	65 %
	52-55	15.0	21	40	60
	56-58	20.0	22	45	55
	59	22.5	23	50	50
	60-64	25.0	24-26	55	45
	65-69	50.0	27	60	40
	70+	100.0	28	65	35
			29+	70	30

Active members who elect to enter DROP are assumed to be in DROP for a period of 5 years, upon which time they take the full lump sum and commence their annuity benefit.

Inactive vested members are assumed to commence their retirement benefit at their earliest eligible retirement date (age 50 or current age if greater).

Termination:	Service	Rate	Service	Rate
		0	10.0 %	6-8
	1	5.0	9-11	1.5
	2	4.0	12-19	1.0
	3-4	3.5	20+	2.0
	5	2.5		

Disability:	Age	Sample Rates
	<=30	0.10 %
35	0.20	
40	0.30	
45	0.40	
50+	0.50	

Rates for ages 30-50 increase by 0.02% per year.

Spouse / Beneficiary: 80 percent of male members and 60 percent of female members are assumed to be married or to have a dependent beneficiary. Male members are assumed to be three (3) years older than their spouses and female members are assumed to be two (2) years younger than their spouses.

Disability Retirement: For members hired after 1989 that become disabled, impairments are assumed to be one percent catastrophic Class 1, 59 percent Class 1, 10 percent Class 2, and 30 percent Class 3.

Form of Payment Members are assumed to elect either a single life annuity or a 70% joint and survivor benefit based on the marriage assumption.

Pre-Retirement Death: Of active member deaths, 20 percent are assumed to be in the line of duty and 80 percent are other than in the line of duty. Additionally, all deaths among retired and disabled members are other than in the line of duty.

1977 Police Officers' and Firefighters' Retirement Fund, continued

Actuarial Methods

Funding uses the same Actuarial Methods as accounting and financial reporting, except where noted.

Actuarial Cost Method: Entry Age Normal – Level Percent of Payroll

The normal cost is calculated separately for each active member and is equal to the level percentage of payroll needed as an annual contribution from entry age to retirement age to fund projected benefits. The actuarial accrued liability on any valuation date is the accumulated value of such normal costs from entry age to the valuation date.

This method produces a cost of future benefit accruals that is a level percent of pay over time, which is desirable for employers from a budgeting standpoint. Other actuarial cost methods are more volatile in their allocation of cost for each year of member service.

Amortization Method:

For funding, gains and losses occurring from census experience different than assumed, assumption changes, and benefit changes are amortized over a 20-year period with level payments each year. A new gain or loss base is established each year based on the additional gain or loss during that year and that base is amortized over a new 20-year period. However, when the plan is at or above 100 percent funded (based on Actuarial Value of Assets), the past amortization bases are considered fully amortized and a single amortization base equal to the surplus is amortized over a 30-year period with level payment each year. The purpose of the method is to give a smooth progression of the costs from year-to-year and, at the same time, provide for an orderly funding of the unfunded liabilities.

For accounting and financial reporting, gains and losses occurring from census experience different than assumed and assumption changes are amortized into expense over the average expected future service of all plan participants. Gains and losses occurring from investment experience different than assumed are amortized into expense over a five-year period. The effect of plan changes on the plan liability are fully recognized in expense in the year in which they occur.

Data Measurement Date:

Member census data as of the prior year end was used in the valuation and adjusted, where appropriate, to reflect changes during the current fiscal year. Standard actuarial roll forward techniques were then used to project the liabilities computed as of prior year end to the current year measurement date.

Asset Valuation Method:

Funding uses the Actuarial Value of Assets (AVA), which is equal to a five-year smoothing of gains and losses on the Fair Value of Assets (FVA), subject to a 20 percent corridor. Accordingly, the AVA is limited to no more than 20 percent greater than or 20 percent less than the FVA.

Accounting and financial reporting uses the FVA in accordance with GASB Statement No. 67.

Plan Provisions

Please refer to Note 1 of the Notes to the Financial Statements in the Financial Section, the actuarial valuation at <https://www.in.gov/inprs/actuarialvaluation.htm>, or the applicable Indiana Code at <http://iga.in.gov/>.

Summary of Actuarial Assumptions, Actuarial Methods, and Plan Provisions

The actuarial assumptions and methods used in the June 30, 2024 valuation of the Judges' Retirement System were adopted by the INPRS Board in April 2024. The majority of the actuarial assumptions and methods are based on plan experience from July 1, 2014 through June 30, 2019, and were first used in the June 30, 2020 valuation. The INPRS Board adopted a funding policy in April 2014, and the policy was last updated in October 2024.

The funding policy is available online at: www.in.gov/inprs/publications/.

Changes in Actuarial Assumptions

There were no changes to the actuarial assumptions during the fiscal year.

Changes in Actuarial Methods

There were no changes to the actuarial methods during the fiscal year.

Changes in Plan Provisions

There were no changes to the plan provisions during the fiscal year.

Actuarial Assumptions

Actuarial assumptions used for funding purposes are the same as those used for accounting and financial reporting, except where noted.

Economic Assumptions

Interest Rate / Investment Return:

Funding	6.25 percent (net of administrative and investment expenses)
Account & Financial Reporting	6.25 percent (net of investment expenses)
Interest on Member Contributions	3.30 percent per year
Inflation	2.00 percent per year
Cost of Living Increases:	2.65 percent per year in deferral and retirement
Future Salary Increases:	2.65 percent per year

Demographic Assumptions: Based on 2015-2019 Experience

Pub-2010 Public Retirement Plans Mortality Tables (Amount-Weighted) with a fully generational projection of mortality improvements using SOA Scale MP-2019.

Mortality (Healthy):	General Employee table with a 1 year setback for males and a 1 year setback for females.
Mortality (Retiree):	General Retiree table with a 1 year setback for males and a 1 year setback for females.
Mortality (Beneficiaries):	Contingent Survivor table with no set forward for males and a 2 year set forward for females.
Mortality (Disabled):	General Disabled table with a 140% load.

Judges' Retirement System, continued

Retirement:

<u>Ages</u>	<u>Eligible for Reduced Benefit</u>	<u>Eligible for Unreduced Benefit</u>
55-61	N/A	20 %
62-64	8 %	20
65-74	N/A	30
75+	N/A	100

Inactive vested members are assumed to commence their retirement benefit at their earliest eligible retirement date.

Termination:

3 percent per year for all members prior to retirement eligibility.

Disability:

<u>Age</u>	<u>Sample Rates</u>
20	0.057 %
25	0.081
30	0.105
35	0.140
40	0.210
44-64	0.300
65+	0.000

Form of Payment

Members are assumed to elect either a single life annuity or a 50% joint survivor benefit base on the marriage assumption.

Spouse / Beneficiary:

90 percent of members are assumed to be married or to have a dependent beneficiary. Male members are assumed to be three (3) years older than their spouses and female members are assumed to be two (2) years younger than their spouses.

Judges' Retirement System, continued

Actuarial Methods

Funding uses the same Actuarial Methods as accounting and financial reporting, except where noted.

Actuarial Cost Method: Entry Age Normal – Level Percent of Payroll

The normal cost is calculated separately for each active member and is equal to the level percentage of payroll needed as an annual contribution from entry age to retirement age to fund projected benefits. The actuarial accrued liability on any valuation date is the accumulated value of such normal costs from entry age to the valuation date.

This method produces a cost of future benefit accruals that is a level percent of pay over time, which is desirable for employers from a budgeting standpoint. Other actuarial cost methods are more volatile in their allocation of cost for each year of member service.

Amortization Method:

For funding, gains and losses occurring from census experience different than assumed, assumption changes, and benefit changes are amortized over a 20-year period with level payments each year. A new gain or loss base is established each year based on the additional gain or loss during that year and that base is amortized over a new 20-year period. However, when the plan is at or above 100 percent funded (based on Actuarial Value of Assets), the past amortization bases are considered fully amortized and a single amortization base equal to the surplus is amortized over a 30-year period with level payment each year. The purpose of the method is to give a smooth progression of the costs from year-to-year and, at the same time, provide for an orderly funding of the unfunded liabilities.

For accounting and financial reporting, gains and losses occurring from census experience different than assumed and assumption changes are amortized into expense over the average expected future service of all plan participants. Gains and losses occurring from investment experience different than assumed are amortized into expense over a five-year period. The effect of plan changes on the plan liability are fully recognized in expense in the year in which they occur.

Data Measurement Date:

Member census data as of the prior year end was used in the valuation and adjusted, where appropriate, to reflect changes during the current fiscal year. Standard actuarial roll forward techniques were then used to project the liabilities computed as of prior year end to the current year measurement date.

Asset Valuation Method:

Funding uses the Actuarial Value of Assets (AVA), which is equal to a five-year smoothing of gains and losses on the Fair Value of Assets (FVA), subject to a 20 percent corridor. Accordingly, the AVA is limited to no more than 20 percent greater than or 20 percent less than the FVA.

Accounting and financial reporting uses the FVA in accordance with GASB Statement No. 67.

Plan Provisions

Please refer to Note 1 of the Notes to the Financial Statements in the Financial Section, the actuarial valuation at <https://www.in.gov/inprs/actuarialvaluation.htm>, or the applicable Indiana Code at <http://iga.in.gov/>.

Excise, Gaming and Conservation Officers' Retirement Fund, continued

Summary of Actuarial Assumptions, Actuarial Methods, and Plan Provisions

The actuarial assumptions and methods used in the June 30, 2024 valuation of the Excise, Gaming and Conservation Officers' Retirement Fund were adopted by the INPRS Board in April 2024. The majority of the actuarial assumptions and methods are based on plan experience from July 1, 2014 through June 30, 2019, and were first used in the June 30, 2020 valuation. The INPRS Board adopted a funding policy in April 2014, and the policy was last updated in October 2024.

The funding policy is available online at: www.in.gov/inprs/publications/.

Changes in Actuarial Assumptions

The DROP period assumption was changed from 3 years to 5 years.

The COLA assumption was revised following the passage of HEA 1004-2024.

Changes in Actuarial Methods

Pursuant to Section 5 of HEA 1004-2024, the 1% cap on the surcharge rates was removed. The surcharge rates may not decrease, but may increase by no more than 0.1% of payroll per year. This section expires 12/31/2029. The surcharge rate method was significantly revised following the passage of HEA 1004-2024.

Changes in Plan Provisions

HEA 1004-2024 increased the maximum drop period from 3 years to 5 years.

A 13th check to be paid in fiscal year 2025 was granted. For the actuarial valuation as of June 30, 2024, the postretirement benefit increase assumption was changed due to the passage of House Enrolled Act No. 1004. In lieu of a select and ultimate COLA assumption of 0.4% until 2034, 0.5% until 2039, and 0.6% in 2039 and thereafter, the act requires supplemental benefit funding for an inflation-indexed 13th check for participants who commence prior to July 1, 2025 and a 1% COLA for commencements thereafter. No additional benefits have yet been granted beyond this fiscal year 2025 13th check.

Actuarial Assumptions

Actuarial assumptions used for funding purposes are the same as those used for accounting and financial reporting, except where noted.

Economic Assumptions

Interest Rate / Investment Return:

Funding	6.25 percent (net of administrative and investment expenses)
Accounting & Financial Reporting	6.25 percent (net of investment expenses)

Interest on Member Contributions: 3.30 percent per year

Inflation: 2.00 percent per year

Cost of Living Increases: A one-time 13th check was granted and payable by October 1, 2024. Thereafter, the following annual cost of living adjustments are assumed:

For members retired before 7/1/2025 - indexed 13th checks, increasing 2% per year

For members retired on or after 7/1/2025 - 1.0% COLAs, compounded annually

Excise, Gaming and Conservation Officers' Retirement Fund, continued

Future Salary Increases:

Based on 2015-2019 experience. Illustrative rates shown below:

Service	Wage Inflation	Merit	Salary Increase
0	2.65 %	2.25 %	4.90 %
1	2.65	2.00	4.65
2	2.65	1.75	4.40
3	2.65	1.50	4.15
4	2.65	1.25	3.90
5	2.65	1.00	3.65
6	2.65	0.75	3.40
7	2.65	0.50	3.15
8	2.65	0.25	2.90
9+	2.65	—	2.65

Demographic Assumptions: Based on 2014-2019 Experience

Pub-2010 Public Retirement Plans Mortality tables (Amount-Weighted) with a fully generational projection of mortality improvements using SOA Scale MP-2019.

Mortality (Healthy):	Safety Employee table with a 3 year set forward for males and no set forward for females.
Mortality (Retirees):	Safety Retiree table with a 3 year set forward for males and no set forward for females.
Mortality (Beneficiaries):	Contingent Survivor table with no set forward for males and a 2 year set forward for females.
Mortality (Disabled):	General Disabled table.

Retirement:

Age	Eligible for Reduced Benefit	Eligible for Unreduced Benefit
45-54	2 %	20 %
55-58	2	25
59	2	35
60	N/A	55
61	N/A	65
62-64	N/A	75
65+	N/A	100

Active members who retire are assumed to enter DROP 50 percent of the time and retire immediately 50 percent of the time. Those who elect to enter DROP are assumed to be in DROP for a period of 5 years, upon which time they take the full lump sum and commence their annuity benefit.

Inactive vested members are assumed to commence their retirement benefit at their earliest eligible retirement date (age 45, or current age if greater).

Termination:

Years of Service	Rate	Years of Service	Rate
0-1	10 %	6	5 %
2	9	7	4
3	8	8	3
4	7	9	2
5	6	10+	1

Excise, Gaming and Conservation Officers' Retirement Fund, continued

Disability:

<u>Age</u>	<u>Sample Rates</u>
<=30	0.1 %
35	0.2
40	0.3
45	0.4
50+	0.5

Rates for ages 30-50 increase by 0.02 percent per year.

Active members who become disabled are assumed to receive 20% of their salary if they have less than five years of service and 40% of their salary if they have five or more years of service.

Spouse / Beneficiary:

90 percent of members are assumed to be married or to have a dependent beneficiary. Males are assumed to be three (3) years older than females and females are assumed to be two (2) years younger than their spouses.

Form of Payment

Members are assumed to elect either a single life annuity or a 50% joint survivor benefit based on the marriage assumption.

Pre-Retirement Death:

Of active member deaths, 20 percent are assumed to be in the line of duty and 80 percent are other than in the line of duty. Additionally, all deaths among retired and disabled members are other than in the line of duty.

Excise, Gaming and Conservation Officers' Retirement Fund, continued

Actuarial Methods

Funding uses the same Actuarial Methods as accounting and financial reporting, except where noted.

Actuarial Cost Method: Entry Age Normal – Level Percent of Payroll

The normal cost is calculated separately for each active member and is equal to the level percentage of payroll needed as an annual contribution from entry age to retirement age to fund projected benefits. The actuarial accrued liability on any valuation date is the accumulated value of such normal costs from entry age to the valuation date.

This method produces a cost of future benefit accruals that is a level percent of pay over time, which is desirable for employers from a budgeting standpoint. Other actuarial cost methods are more volatile in their allocation of cost for each year of member service.

Amortization Method: For funding, gains and losses occurring from census experience different than assumed, assumption changes, and benefit changes are amortized over a 20-year period with level payments each year. A new gain or loss base is established each year based on the additional gain or loss during that year and that base is amortized over a new 20-year period. However, when the plan is at or above 100 percent funded (based on Actuarial Value of Assets), the past amortization bases are considered fully amortized and a single amortization base equal to the surplus is amortized over a 30-year period with level payment each year. Effective June 30, 2018, the bases are calculated without regards to the COLA provisions. The purpose of the method is to give a smooth progression of the costs from year-to-year and, at the same time, provide for an orderly funding of the unfunded liabilities.

For accounting and financial reporting, gains and losses occurring from census experience different than assumed and assumption changes are amortized into expense over the average expected future service of all plan participants. Gains and losses occurring from investment experience different than assumed are amortized into expense over a five-year period. The effect of plan changes on the plan liability are fully recognized in expense in the year in which they occur.

Data Measurement Date: Member census data as of the prior year end was used in the valuation and adjusted, where appropriate, to reflect changes during the current fiscal year. Standard actuarial roll forward techniques were then used to project the liabilities computed as of prior year end to the current year measurement date.

COLA Surcharge: The surcharge rate is based on the same normal cost and amortization method as is being used for the base benefits, effective with the 2024 valuation which is required by HEA 1004-2024 to begin funding for an inflation-indexed 13th check and 1% COLA. These benefits have not been granted or promised beyond a 13th check payable in Fiscal Year 2025.

Asset Valuation Method: Funding uses the Actuarial Value of Assets (AVA), which is equal to a five-year smoothing of gains and losses on the Fair Value of Assets (FVA), subject to a 20 percent corridor. Accordingly, the AVA is limited to no more than 20 percent greater than or 20 percent less than the FVA.

Accounting and financial reporting uses the FVA in accordance with GASB Statement No. 67.

Plan Provisions

Please refer to Note 1 of the Notes to the Financial Statements in the Financial Section, the actuarial valuation at <https://www.in.gov/inprs/actuarialvaluation.htm>, or the applicable Indiana Code at <http://iga.in.gov/>.

Summary of Actuarial Assumptions, Actuarial Methods, and Plan Provisions

The actuarial assumptions and methods used in the June 30, 2024 valuation of the Prosecuting Attorneys' Retirement Fund were adopted by the INPRS Board in April 2024. The majority of the actuarial assumptions and methods are based on plan experience from July 1, 2014 through June 30, 2019, and were first used in the June 30, 2020 valuation. The INPRS Board adopted a funding policy in April 2014, and the policy was last updated in October 2024.

The funding policy is available at: www.in.gov/inprs/publications/.

Changes in Actuarial Assumptions

There were no changes to the actuarial assumptions during the fiscal year.

Changes in Actuarial Methods

There were no changes to the actuarial methods during the fiscal year.

Changes in Plan Provisions

There were no changes to the plan provisions during the fiscal year.

Actuarial Assumptions

Except as noted below, actuarial assumptions used for funding purposes are the same as those used for accounting and financial reporting.

Economic Assumptions

Interest Rate / Investment Return:

Funding	6.25 percent (net of administrative and investment expenses)
Account & Financial Reporting	6.25 percent (net of investment expenses)
Interest on Member Contributions	3.30 percent per year
Inflation	2.00 percent per year
Cost of Living Increases:	N/A
Future Salary Increases:	2.65 percent per year

Demographic Assumptions: Based on 2015-2019 Experience

Pub-2010 Public Retirement Plans Mortality Tables (Amount-Weighted) with a fully generational projection of mortality improvements using SOA Scale MP-2019.

Mortality (Healthy):	General Employee table with a 1 year setback for males and a 1 year setback for females.
Mortality (Retirees):	General retiree table with a 1 year setback for males and a 1 year setback for females.
Mortality (Beneficiaries):	Contingent Survivor table with no set forward for males and a 2 year set forward for females.
Mortality (Disabled):	General Disabled table with a 140% load.

Prosecuting Attorneys' Retirement Fund, continued

Retirement:

Ages	Eligible for Reduced Benefit	Eligible for Unreduced Benefit
55-61	N/A	40 %
62-64	20 %	40
65-69	N/A	50
70+	N/A	100

Inactive vested members are assumed to commence their retirement benefit at their earliest unreduced eligible retirement date (age 62, or current age if greater).

Termination:

10 percent per year for all members prior to retirement eligibility

Disability:

Age	Sample Rates	
	Male	Female
20	0.004 %	0.003 %
25	0.008	0.006
30	0.014	0.010
35	0.024	0.018
40	0.042	0.032
45	0.080	0.061
50	0.160	0.124
55+	0.300	0.200

Form of Payment

Members are assumed to elect either a single life annuity or a 50% joint survivor benefit base on the marriage assumption.

Spouse / Beneficiary:

90 percent of members are assumed to be married or to have a dependent beneficiary. Males are assumed to be three (3) years older than their spouses and females are assumed to be two (2) years younger than their spouses.

Prosecuting Attorneys' Retirement Fund, continued

Actuarial Methods

Funding uses the same Actuarial Methods as accounting and financial reporting, except where noted.

Actuarial Cost Method: Entry Age Normal – Level Percent of Payroll

The normal cost is calculated separately for each active member and is equal to the level percentage of payroll needed as an annual contribution from entry age to retirement age to fund projected benefits. The actuarial accrued liability on any valuation date is the accumulated value of such normal costs from entry age to the valuation date.

This method produces a cost of future benefit accruals that is a level percent of pay over time, which is desirable for employers from a budgeting standpoint. Other actuarial cost methods are more volatile in their allocation of cost for each year of member service.

Amortization Method:

For funding, gains and losses occurring from census experience different than assumed, assumption changes, and benefit changes are amortized over a 20-year period with level payments each year. A new gain or loss base is established each year based on the additional gain or loss during that year and that base is amortized over a new 20-year period. However, when the plan is at or above 100 percent funded (based on Actuarial Value of Assets), the past amortization bases are considered fully amortized and a single amortization base equal to the surplus is amortized over a 30-year period with level payment each year. The purpose of the method is to give a smooth progression of the costs from year-to-year and, at the same time, provide for an orderly funding of the unfunded liabilities.

For accounting and financial reporting, gains and losses occurring from census experience different than assumed and assumption changes are amortized into expense over the average expected future service of all plan participants. Gains and losses occurring from investment experience different than assumed are amortized into expense over a five-year period. The effect of plan changes on the plan liability are fully recognized in expense in the year in which they occur.

Data Measurement Date:

Member census data as of the prior year end was used in the valuation and adjusted, where appropriate, to reflect changes during the current fiscal year. Standard actuarial roll forward techniques were then used to project the liabilities computed as of prior year end to the current year measurement date.

Asset Valuation Method:

Funding uses the Actuarial Value of Assets (AVA), which is equal to a five-year smoothing of gains and losses on the Fair Value of Assets (FVA), subject to a 20 percent corridor. Accordingly, the AVA is limited to no more than 20 percent greater than or 20 percent less than the FVA.

Accounting and financial reporting uses the FVA in accordance with GASB Statement No. 67.

² LE DB is a closed plan with no Covered Employee Payroll.

Legislators' Defined Benefit Fund, continued

Summary of Actuarial Assumptions, Actuarial Methods, and Plan Provisions

The actuarial assumptions and methods used in the June 30, 2024 valuation of the Legislators' Defined Benefit Fund were adopted by the INPRS Board in April 2024. The majority of the actuarial assumptions and methods are based on plan experience from July 1, 2014 through June 30, 2019, and were first used in the June 30, 2020 valuation. The INPRS Board adopted a funding policy in April 2014, and the policy was last updated in October 2024.

The funding policy is available online at: www.in.gov/inprs/publications/.

Changes in Actuarial Assumptions

The COLA assumption was revised following the passage of HEA 1004-2024.

Changes in Actuarial Methods

The Entry Age Normal cost method was adopted in place of the Traditional Unit Credit cost method since there is no longer any normal cost under either method.

The supplemental benefit methodology was revised following the passage of HEA 1004-2024.

Changes in Plan Provisions

For the actuarial valuation as of June 30, 2024, the postretirement benefit increase assumption was changed due to the passage of House Enrolled Act No. 1004. In lieu of a select and ultimate COLA assumption of 0.4% until 2034, 0.5% until 2039, and 0.6% in 2039 and thereafter, the act requires supplemental benefit funding for an inflation-indexed 13th check for participants who commence prior to July 1, 2025 and a 1% COLA for commencements thereafter. No additional benefits have yet been granted beyond this fiscal year 2025 13th check.

Actuarial Assumptions

Except as noted below, actuarial assumptions used for funding purposes are the same as those used for accounting and financial reporting.

Economic Assumptions

Interest Rate / Investment Return:

Funding	6.25 percent (net of administrative and investment expenses)
Accounting & Financial Reporting	6.25 percent (net of investment expenses)

Inflation: 2.00 percent per year

Cost of Living Increases: A one-time 13th check was granted and payable by October 1, 2024. Thereafter, the following annual cost of living adjustments are assumed:
For members retired before 7/1/2025 - indexed 13th checks, increasing 2% per year
For members retired on or after 7/1/2025 - 1.0% COLAs, compounded annually

Demographic Assumptions: Based on 2015-2019 Experience

Pub-2010 Public Retirement Plans Mortality Tables (Amount-Weighted) with a fully generational projection of mortality improvements using SOA Scale MP-2019.

Mortality (Healthy):	General Employee table with a 1 year setback for males and a 1 year setback for females.
Mortality (Retirees):	General Retiree table with a 1 year setback for males and a 1 year setback for females.
Mortality (Beneficiaries):	Contingent Survivor table with no set forward for males and a 2 year set forward for females.
Mortality (Disabled):	General Disabled table with a 140% load.

Legislators' Defined Benefit Fund, continued

Retirement:	<u>Age</u>	<u>Rate</u>
	55	10 %
	56-57	8
	58-61	2
	62-64	5
	65+	100

Inactive vested members are assumed to commence their retirement benefit at their earliest eligible retirement date.

Termination: None

Disability: None

Form of Payment: Members are assumed to elect either a single life annuity or a 50% joint survivor benefit base on the marriage assumption.

Spouse / Beneficiary: 90 percent of members are assumed to be married or to have a dependent beneficiary. Males are assumed to be three (3) years older than their spouses and females are assumed to be two (2) years younger than their spouses.

Legislators' Defined Benefit Fund, continued

Actuarial Methods

Funding uses the same Actuarial Methods as accounting and financial reporting, except where noted.

Actuarial Cost Method: Entry Age Normal – Level Percent of Payroll

The normal cost is calculated separately for each active member and is equal to the level percentage of payroll needed as an annual contribution from entry age to retirement age to fund projected benefits. The actuarial accrued liability on any valuation date is the accumulated value of such normal costs from entry age to the valuation date.

This method produces a cost of future benefit accruals that is a level percent of pay over time, which is desirable for employers from a budgeting standpoint. Other actuarial cost methods are more volatile in their allocation of cost for each year of member service.

Amortization Method: For funding, gains and losses occurring from census experience different than assumed, assumption changes, and benefit changes are amortized over a five-year period with level payments each year. A new gain or loss base is established each year based on the additional gain or loss during that year and that base is amortized over a new five-year period. However, when the plan is at or above 100 percent funded (based on Actuarial Value of Assets), the past amortization bases are considered fully amortized and a single amortization base equal to the surplus is amortized over a 30-year period with level payment each year. The purpose of the method is to give a smooth progression of the costs from year-to-year and, at the same time, provide for an orderly funding of the unfunded liabilities.

For accounting and financial reporting, gains and losses occurring from census experience different than assumed and assumption changes are amortized into expense over the average expected future service of all plan participants. Gains and losses occurring from investment experience different than assumed are amortized into expense over a five-year period. The effect of plan changes on the plan liability are fully recognized in expense in the year in which they occur.

Data Measurement Date: Member census data as of the prior year end was used in the valuation and adjusted, where appropriate, to reflect changes during the current fiscal year. Standard actuarial roll forward techniques were then used to project the liabilities computed as of prior year end to the current year measurement date.

COLA Funding Amount: The COLA may be funded by either direct State appropriations or by allocation of a portion of the lottery proceeds. For consistency with other funds, a surcharge rate is calculated based on the same normal cost and amortization method as is being used for the base benefits. This is effective with the 2024 valuation which is required by HEA 1004-2024 to begin funding for an inflation-indexed 13th check and 1% COLA. These benefits have not been granted or promised.

Asset Valuation Method: Funding uses the Actuarial Value of Assets (AVA), which is equal to a five-year smoothing of gains and losses on the Fair Value of Assets (FVA), subject to a 20 percent corridor. Accordingly, the AVA is limited to no more than 20 percent greater than or 20 percent less than the FVA.

Accounting and financial reporting uses the FVA in accordance with GASB Statement No. 67.

Plan Provisions

Please refer to Note 1 of the Notes to the Financial Statements in the Financial Section, the actuarial valuation at <https://www.in.gov/inprs/actuarialvaluation.htm>, or the applicable Indiana Code at <http://iga.in.gov/>.
