Treatment of Tobacco Use and Dependence

Medicaid Covers It!

COVERAGE AND LIMITATIONS

- Reimbursement for tobacco cessation is available for one 12-week course.
- Treatment may include multiple medications (written prescriptions required for OTC meds) combined with counseling.
- One or more medications may be utilized (written prescription required for OTC meds).
- Counseling MUST be included in any combination of treatment.
- Prior authorization is not required for reimbursement for smoking cessation products or counseling.

BILLING INSTRUCTIONS AND REIMBURSEMENT

Counseling Services

- Bill only on the CMS 1500 claim form or 837P, utilizing procedure code S9075—Smoking Cessation Treatment with a primary diagnosis code of 305.1 (tobacco use disorder).
- One unit of S9075 is 15 minutes of service. Fractional units of service cannot be billed; providers should accumulate billable time equivalent to whole units before billing. Providers should not round up to the nearest 15 minutes.
- Counseling must be provided within the 12-week course of treatment and must be a minimum of 30 minutes (two units) with a maximum of 150 minutes (10 units).

Hoosier Healthwise programs may also cover additional codes for tobacco cessation. Providers are encouraged to contact the Hoosier Healthwise program to which the member is assigned for more specific reimbursement information. Please contact your Medicaid/health plan provider representative or visit www.indianamedicaid.com for additional information.

SMOKING CESSATION PRODUCTS

Reimbursement is available to pharmacy providers for over-the-counter and prescription smoking cessation products when prescribed by a licensed practitioner within the scope of his/her license under Indiana law within the 12-week treatment timeframe.

Products covered by Indiana Medicaid include, but are not limited to:

- Sustained-release bupropion products—Zyban® and generic
- Nicotine replacement drug products (patch, gum, inhaler, lozenge, nasal spray)
- Varenicline (Chantix®)

Pharmacies will bill for reimbursement according to the normal procedures as outlined in the Medicaid Provider Manual.

SMOKING CESSATION COUNSELING

Counseling services must be prescribed by a licensed practitioner and rendered by the following licensed practitioners participating in the Indiana Medicaid Program:

- Physician
- Physician’s assistant
- Nurse practitioner
- Registered nurse

Counseling must be provided as follows:

- Counseling MUST be billed in fifteen (15) minute increments.
- A minimum of 30 minutes (two units) and a maximum of 150 minutes (10 units) within 12 weeks.

2008 BILLING CODES FOR TOBACCO CESSATION COUNSELING

Tobacco cessation counseling is a billable service for which health care providers can submit for reimbursement.

The following codes should be used when submitting for reimbursement:

99406 Smoking and tobacco use cessation counseling visit; greater than 3 minutes up to 10 minutes
99407 Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes
D1302 Smoking and tobacco use cessation counseling during dental visit

### ADVERSE REACTIONS

- **Local skin reaction** (Rotate and use same brand cream or try a different brand), headache, sleep disturbances (insomnia, abnormal dreams)
- **Mouth soreness, hiccup, dry mouth, mild, transient jaw ache** (Correct technique)
- **Headaches, insomnia, nausea if swallowed or chewed** (Correct technique)
- **Local transient irritation in nose, throat and eyes** (Typically resolved through regular use)
- **Mouth and throat irritation**
- **Dry mouth, insomnia (Avoid use at bedtime), shakiness, skin rash, constipation, seizure risk is 1/1,000 (Instructions for Use 0.1%)**
- **Nausea, headache, insomnia, constipation, abnormal dreams, neuropsychiatric symptoms (See Precautions, below)**

### PRECAUTIONS, CONTRAINDICATIONS AND WARNINGS

- **PRECAUTIONS:** Pregnancy and breastfeeding, serious underlying heart arrhythmia, serious or worsening angina pectoris
- **PRECAUTIONS:** Pregnancy and breastfeeding, serious underlying heart arrhythmia, serious or worsening angina pectoris
- **PRECAUTIONS:** Pregnancy and breastfeeding, serious underlying heart arrhythmia, serious or worsening angina pectoris
- **PRECAUTIONS:** Pregnancy and breastfeeding, serious underlying heart arrhythmia, serious or worsening angina pectoris
- **PRECAUTIONS:** Pregnancy and breastfeeding, serious underlying heart arrhythmia, serious or worsening angina pectoris
- **CONTRAINDICATIONS:** Seizure disorder, current use of West-butin/bupropion, current or prior bulimia or anorexia nervosa, current or recent use of MAO inhibitors Warning: See below for FDA warning**

### DAILY COST***

- **Nicotrol® Inhaler**
- **Nicotrol® NS**
- **Nicotrol® Generic**
- **Nicotrol® Chewable**

### INSTRUCTIONS FOR USE

- **Stop all tobacco use prior to treatment.** Apply 1 patch to healthy, clean, dry, hairless skin such as upper arm or hip. Remove and replace daily. Rotate patch site.
- **Stop all tobacco use prior to treatment.** Chew gum slowly until you notice a peppery taste and a slight tingle. Then park between your cheek and gum. When taste and tingle fade, bite until it starts working again, then park in another part of your mouth. Continue for 30 minutes.
- **Stop all tobacco use prior to treatment.** Blow nose if it is not clear. Fill head back slightly, insert tip of bottle as far into nostril as is comfortable. Breathe through mouth. Spray once in each nostril. Do not sniff or inhale while spraying. If nose runs, gently sniff to keep spray in nose. Wait two or three minutes before blowing nose.
- **Stop all tobacco use prior to treatment.** Pull off the top of the mouthpiece and insert cartridge until seal breaks. Replace top. Align marks to close. Inhale a short breath to the back of mouth or puff in short breaths. Do not inhale into lungs. The nicotine in a cartridge lasts for about 20 minutes of active puffing.
- **Start using Chantix one week before quitting tobacco use. Chantix should be taken after eating and with a full glass of water. Days 1-3, take one 0.5 mg tablet once daily, Days 4-7, take 0.5 mg tablet twice daily. Days 8-end of treatment, take 1 mg tablet twice daily.

### Notes

- *Inclusion of this adult dosage chart is strictly for the convenience of the prescribing provider. Please consult the Physicians’ Desk Reference or the product manufacturer for complete product information and contraindications.
- **Assess prior to prescribing and observe patients on Chantix for “serious” neuropsychiatric symptoms, including changes in behavior, agitation, depressed mood, suicidal ideation and suicidal behavior.
- **The price ranges are based upon generic and brand availability. The nasal spray, inhaler and Chantix are not yet available in generic form.
